

Running Games and Other Apps for Microsoft Windows on Linux

Quentin Barnes
12/15/22

Wine

- MS Windows compatibility layer for Linux
 - And for other OSes too (MacOS, BSD, etc.)
- Not an emulator
 - Translates Windows API Calls to POSIX Calls
- Can be cumbersome to install and configure

Wrappers for Wine

- Hides complexity of installing and configuring Wine
- Uses Flatpak or Snaps for installing
- Lutris
 - Touchy but Usable, attractive for tinkerers
- Bottles
 - More polished, easiest I've found to use

Demo
