Vibe Coding

- Vibe Coding is letting AI do all the development
 - No knowledge of computer languages needed
 - Just describe what you want in English
 - Sit back and watch it do it all the work!

Fable 5

- This talk was going to be using Anthropic's Fable 5
- Critiques its own work
- Reads and understands documents
 - Text, charts, tables
- Outlawed by the current administration
 - “Fix this code” is a munition
- But other models can be good too

A Short Side Venture

- **Model Context Protocol (MCP)**
 - A standard for AIs to talk with existing software/systems
- **Windows MCP**
 - Use prompts control Microsoft Windows
- **FORScan**
 - OBD2 reader with manufacturer-specific codes and modules
 - Supports Ford, Mazda, Lincoln, and Mercury

First Demo! (Sort of)

- Chose a simple program most know (Pong)
- Used **Claude Code** for vibing
 - **Sonnet 4.6**
 - least expensive/least capable CC model
 - Desktop app available for MacOS/Windows
 - Linux uses a command line interface
- **All done in one pass** (one try, no do-overs)
 - Used about 5% of my weekly limit

Second Demo!

- [World of ClaudeCraft](#)
- Vibe Coded using Fable 5 (before illegal)
- Author used less than \$100 of Fable's time
 - One month of max plan is \$100
- [Repo](#) on GitHub

Want to try out CC yourself?

- Claude Code does require paid service
 - I'm at Claude's \$20/mo plan which includes CC
- I have a few free 7-day passes for CC
